

Travel Management Begins Upstream

The Travel Operations, Spend & Data Platform

For over three decades, Cornerstone has been helping clients build scalable solutions that harness data, streamline operations, solve the industry's most difficult problems, and deliver exceptional customer service.

Cornerstone's next-generation platform, Upstream, modernizes the travel enterprise with data and automation to unlock the value needed to succeed in today's rapidly changing world. Our integrated solution ties three major areas of your organization into a single powerful platform.

Automate

Lower Costs

By streamlining workflows and eliminating manual tasks.

Aggregate

Knock Down Data Silos

With centralized and clean enterprise-wide data across systems.

Analyze

Faster, Smarter Decisions

Driven by integrated, predictive insights.

Act

Insights That Illuminate

By triggering intelligent, proactive actions with AI-powered recommendations.

Connect and Automate Travel + Expense Data Across the Enterprise

Unify booking and expense data in one platform for smarter automation, deeper visibility, and total control.

Upstream aggregates data from Sabre, Amadeus, Travelport, and systems like Concur Expense and your HRM—streamlining everything from booking to reimbursement.

Data Management

The Solid Foundation To Power Success

Cornerstone combines our deep experience in travel and spend automation with the latest data science and data management technology to solve data issues at the root. One system to power all your analytics and automation.

- **Acquisition:** Integrates data from any relevant source into a single, serviceable whole
- **Enhancement:** Quality checks for consistency and completeness, using statistical anomaly detection for a "self-healing" system to continually improve the dataset
- **Secure Access:** Rather than distribute data out, which leads to disconnects across the organization, provides secure access so users see only authorized slices of the master dataset
- **Analytics:** From basic transaction reporting to advanced prescriptive analytics, in perfect sync across your business

Travel Operations

Today's Challenges Need Automation Built For Tomorrow

Change is bombarding travel businesses from all sides: NDC, AI, schedule change, climate imperatives, work from home, post-COVID staffing challenges. Automation is the key to transforming these risks to opportunities.

- **Full post-booking automation:** Scalable solutions for Unused Tickets, Schedule Changes, Analytics, Policy Compliance
- **Multi-source:** Receive content from sources beyond GDS and aggregators for new categories, platforms and providers
- **Easily configurable:** Shapes to fit your operations, not vice versa, with DIY through full support options

Spend Management

You've Digitized, But Have You Connected?

Cornerstone's Spend Management solution automatically communicates across platforms improving efficiency and coordination across silos.

- **Data aggregation:** Captures and aggregates invoice and expense data for capture, approval and exception resolution
- **Synchronization:** Automates the exchange and integration between expense, ERP, payment and human capital management systems
- **Visualization:** Provides a current, consistent view of cash flow and other key metrics for better, faster decisions
